PROJECT

House hold Service Provider System
The "Household Service Provider" is an online platform that provides users with various home services with the assistance of a service provider. Within this website, we have created three important panels: the User Panel - In this panel, homeowners can register as customers and access the services we provide on our website and monitor the status of the home service they are receiving. The Service Provider Panel- In this panel, service providers register themselves on our website by providing their details with valid identification proof or working license. The service provider can also update the status of the ordered service when the job is completed. Administration Panel - This admin panel provides login access for administrators through the website, which redirects them to the admin panel.This provides the administrator with the ability to manage new service types and remove services. The administrator also manages user data and service provider data.
